

This report is compiled by the U.S. Fish and Wildlife Service, CT River Fish and Wildlife Conservation Office using fishway count data provided by several agencies as well as power companies and is dependent in most cases on the review of video counts, that have an associated time lag for updates. Please visit <http://www.fws.gov/r5crc> for more information.

* CTDEEP will not operate the Rainbow Fish Ladder due its documented poor performance and the lack of suitable downstream fish passage protection measures at the Stanley Works owned dam/project. Fish passage at this project has been the responsibility of the CTDEEP, due to FERC legal rulings.

** total collected from 4 eel ramp/traps at Holyoke in 2025

Water temperatures, reported at the Thompsonville gauge, remained elevated around 24C (75F), just about 4.5C (8F) above the three year median average. Warm! Main stem river discharge held steady at ~10,000 cfs (the 23-year median average) until rain from up north raised that to about 20,000 cfs on Wednesday, Jun 17th. Flow is beginning to taper off, but will probably come back up with today's rain. Our team finished the annual river herring assessments on Tuesday at Wethersfield Cove, catching 23 blueback. HGE passed their tenth Atlantic Salmon and their first short-nosed sturgeon of the year!

HGE's first short-nosed sturgeon of the year

Left. Main stem river discharge. June 11 - 18 at Holyoke, MA.

Right. Main stem temperature. June 11 - 18 at Thompsonville, CT.
